

WHAT IS CLAIMED IS:

- Su b A* 1. A data processing system comprising:
a display control unit of implementing a display module
for displaying at least one format file containing a fixed format,
5 and at least one data file containing item data to be set to
the fixed format;
a specifying control unit of implementing a specifying
module for specifying any one of the format file and the data
file, and also specifying the other category of file from this
one file; and
10 a setting unit for setting the item data of the data file
to the fixed format of the format file in accordance with the
specifying operation.
- Su b B* 15 2. A data processing system according to claim 1, wherein
when there are provided a plurality of format files or data files,
said setting unit sets the item data to the fixed format of the
format file, and creates the plurality of files at one time.
- 20 3. A data processing system according to claim 1 or 2,
wherein said setting unit sets the item data of the data file
to the fixed format of the format file by a form overlay function
in accordance with the specifying operation.
- Su b A* 25 4. A data processing system according to claim 1 or 2,
further comprising a distinguishing unit of distinguishing
between file formats of the specified format file and data file.

5. A data processing system according to claim 4, wherein
said distinguishing unit distinguishes between the file formats
of the format file and the data file on the basis of any one
5 category of element among extensions, file names and a file
selection order.

10 6. A data processing system according to claim 1 or 2,
further comprising a print control unit of implementing a print
module for printing contents of the item data of the data file
which have been set to the fixed format of the format file in
accordance with the specifying operation.

15 7. A data processing system according to claim 1 or 2,
wherein said specifying control unit implements the specifying
module for specifying the format file and the data file by a
drag and drop function.

20 8. A data processing system according to claim 1 or 2,
wherein said setting unit sets the item data of the data file
to the fixed format of the format file in accordance with the
specifying operation of specifying the format file and the data
file that are displayed in the form of display objects.

25 9. A data-processing method comprising:
implementing a display module for displaying at least one
format file containing a fixed format, and at least one data

file containing item data to be set to the fixed format;

implementing a specifying module for specifying any one of the format file and the data file, and also specifying the other category of file from this one file; and

5 setting the item data of the data file to the fixed format of the format file in accordance with the specifying operation.

10. A data processing method according to claim 9, further comprising setting, when there are provided a plurality of format files or data files, the item data to the fixed format of the format file, and creating the plurality of files at one time.

11. A data processing method according to claim 9 or 10, further comprising setting the item data of the data file to the fixed format of the format file by a form overlay function in accordance with the specifying operation.

12. A data processing method according to claim 9 or 10, further comprising distinguishing between file formats of the specified format file and data file.

20
25 13. A data processing method according to claim 9 or 10, further comprising implementing a print module for printing contents of the item data of the data file which have been set to the fixed format of the format file in accordance with the specifying operation.

14. A data processing method according to claim 9 or 10,
further comprising implementing the specifying module for
specifying the format file and the data file by a drag and drop
function.

5

15. A data processing method according to claim 9 or 10,
further comprising setting the item data of the data file to
the fixed format of the format file in accordance with the
specifying operation of specifying the format file and the data
file that are displayed in the form of display objects.

Suarez
10 16. A readable-by-computer medium recorded with a program
comprising:

15 a step of implementing a display module for displaying
at least one format file containing a fixed format, and at least
one data file containing item data to be set to the fixed format;

a step of implementing a specifying module for specifying
any one of the format file and the data file, and also specifying
the other category of file from this one file; and

20 a step of setting the item data of the data file to the
fixed format of the format file in accordance with the specifying
operation.

25 17. A readable-by-computer medium recorded with a program
according to claim 16, further comprising a step of setting,
when there are provided a plurality of format files or data files,
the item data to the fixed format of the format file, and creating

the plurality of files at one time.

18. A readable-by-computer medium recorded with a program according to claim 16 or 17, further comprising a step of setting 5 the item data of the data file to the fixed format of the format file by a form overlay function in accordance with the specifying operation.

19. A readable-by-computer medium recorded with a program according to claim 16 or 17, further comprising a step of 10 distinguishing between file formats of the specified format file and data file.

20. A readable-by-computer medium recorded with a program according to claim 16 or 17, further comprising a step of 15 implementing a print module for printing contents of the item data of the data file which have been set to the fixed format of the format file in accordance with the specifying operation.

20 21. A readable-by-computer medium recorded with a program according to claim 16 or 17, further comprising a step of 20 implementing the specifying module for specifying the format file and the data file by a drag and drop function.

25 22. A readable-by-computer medium recorded with a program according to claim 16 or 17, further comprising a step of setting 25 the item data of the data file to the fixed format of the format

file in accordance with the specifying operation of specifying
the format file and the data file that are displayed in the form
of display objects.
